

CEPA SUPPLIER

January 2024 Newsletter

HAPPY NEW YEAR 2024

The Board of Directors, CEO and the Team at CEPA hope that all our members have had a joyous Christmas and have a Happy New Year. Members will be pleased to know that the Co-operative continues to grow and gain financial strength through an ever expanding membership base, and our commitment to the Co-operative ethos of, competitive pricing, honest and transparent operation, exceptional service and responsible management.

CEPA has once again managed to secure good quantities of quality hay (Lucerne, Oaten & Ryegrass) that will last throughout 2024. With the threat of an el'nino season approaching, members can be assured that sales will be focussed on members first, and that no extra unusual sales to non-members will be allowed that will deplete the availability for members.

Our association with the AIRR group (Australian Independent Rural Retailers) continues to be a valuable asset and provides us with the opportunity to source a huge range of products at the best wholesale prices available in the rural market. Members are encouraged to enquire about any product on the market. If we don't have what you need in stock, we can generally get it within a couple of days and at the best price available. Just ask us.

CEPA continues to support local community groups, albeit in 2024 through a new system of Sponsorship for Members that will benefit both Members and their preferred organisations. Watch out for details and Application information in our Newsletters. We hope that you value the CEPA monthly Newsletter and again welcome any input members may wish to contribute to it. Please contact Melissa at the Co-op to discuss your ideas Ph. (03) 5443 6072.

The team at CEPA look forward to seeing you all again this year and will work hard to support your every Stockfeed, Animal Health and General Farm Merchandise needs in 2024.

Rob Bogumil, CEO, CEPA Co-operative Limited

KEEPING YOUR HORSE COMFORTABLE DURING PERIODS OF HOT WEATHER

- Ride early or late in the day to avoid the hottest temperatures.
- Use cold water hosing or sponging to cool your horse after exercise. Apply cold water, scrape it off, and pour on more to carry heat away.
- Allow your horse to drink during and after exercise periods. Frequently give your horse water until it has consumed as much water as desired.
- Think about your horse's condition frequently as you ride. If your horse gets hot, sweaty, and is breathing hard, take a break.
- If you accidentally overdo exercise and your horse is still hot and breathing hard several minutes after stopping exercise, make every effort to reduce its body temperature.
- With older horses or those in obese or unfit condition, take care to limit exercise in hot weather. These horses may get overheated more quickly and be less able to lose excess heat.
- All horses should have access to a salt block. If your horse is working regularly in hot weather, consider using an electrolyte supplement.
- Be sure your horse is comfortable even when it is not working. Provide access to plenty of fresh water and a shady spot to rest. Use a fly sheet or fly spray as needed to guarantee he or she can relax. Putting sunscreen on white or light-colored muzzles will keep sensitive skin from getting painfully burned.
- Anhidrosis (not producing enough sweat) is an often overlooked cause of heat intolerance or poor performance. Consult your veterinarian.

Kohnke's Own® Summer Equine Tips

THE FUTURE OF HORSE NUTRITION

Turning out your older, well-conditioned show, dressage horse or pony out over the Christmas holiday season?

Be aware that there is a high risk of summer acute laminitis and founder within 3-4 days of full time grazing.

If this occurs, it's recommended by Kohnke's Own that horses should be in a yard overnight and fed soaked hay and a small snack of dampened chaff with a supplement of Kohnke's Own TRIM.

TRIM maintains a safe sugar metabolism for horses at risk of laminitis due to underlying Insulin Resistance.

1.4kg \$74.80
4kg \$182.60

Travelling with your horse in Hot Weather?

5 days before, during travel and competition mix 30g of Kohnke's Own Cell Salts for a 500kg horse and equal amount of plain, fine salt into the feed each day to maintain normal blood salt levels.

Prior to, during travel and rest stops provide dampened hay and 5 litres per 100kg body weight of cool clean water.

2kg \$32.10
5kg \$68.60

COUNTERPOINT SHEEP PERFORMA - EWE & LAMB

Grass Fed Pellets are grain free pellets suitable for feeding in grass fed feeding programs where grain-based supplements are unsuitable.

They are ideal of use as a partial alternative to hay, or as a means of extending available forage sources, such as pasture or hay.
